Title: Racial Integration

Author: Isk

-----

Society has developed a cancerous tumour. The virtues have been practically taken over by agents loyal to the elven conspiracy and minor race factions. As we do not have the space to print the details of how society devolved into acceptance of those different from the norm, those with physical abnormalities that separate them from the superior human specimen, we will state that it is the carriers of virtue, the HOA, that have helped the devolution of human superiority by accepting orcs, elves and other minor-races into their fold.

The near global acceptance of non-humans into previously human controlled organizations, towns and schools has caused a degenerative effect on the youth of humanity.

Picture a child that has grown up among its own kind for its entire life sitting in school. The door opens and the teacher introduces a new student, an orc. As rare as the situation may be it does occur. The natural repulsive appearance of the orc, much like a creature out of nightmares will obviously traumatize the child.

Studies show that children of different races fear

each other from the age of two years. At such ages the psychological damage from fear can be irreparable and may cause phobias and dementia, in essence the human child would be scarred for life upon forced co-existence with the orc child.

The same can be said about dwarves and elves.

It is proven that dwarven children consume as much alcohol as a full grown human adult from the age of four upwards. The dwarven resistance to most toxins makes them heavy drinkers. As dwarves look similar to humans the natural human defence mechanism of repulsion to ugly and disturbing things (like the orc case) would not prevent the child from making friends with the dwarf. As all youth are influenced by their friends the child would eventually turn into a drinker.

Early alcoholism would end the child's future. In the elf case the unnatural attractiveness of the elven frame would turn human girls into a depressed 'I want to look like that' mentality when they gaze upon an elven girl. Early fascination with elven customs and personalities will lead the human into the spider's web. Elves train their children to create contacts from when they are 12 years old, this combined with their inert ability to lie and sound honest makes them terrible teachers and threats within the school as children infiltrators.

What is the solution?

Humanis strongly  
encourages all institutions  
and families with children  
to say no to integration.  
Let us keep our children  
with their own kind.
